modeling away from traditional data models (statistical) towards machine learning and computer science. A neural network is a very highly parametrized model that mimics the structure of the human brain and was purported to be a universal approximator. Basically, the claim was that if you feed a neural network enough data, it will find any

This chapter discusses the application of deep neural networks for natural language processing. First, we discuss word vector representation followed by feedforward neural networks. Next, training of deep neural network models and their optimization are discussed.
