Guide to Aluminum Construction in High-Wind Areas: Amazon ...

Aluminium is the second most widely specified metal in buildings after steel, and is used in all construction sectors, from commercial buildings to domestic dwellings. 40% of the UK annual production of aluminium is utilized within the construction industry, which equates to roughly 150,000 tonnes of aluminium per annum, of which approximately 65,000 tonnes is extruded products, and 25,000 tonnes sheet materials.

Use of Aluminium In Building Construction

Though steel is a standard metal for many construction projects, it's cumbersome. In fact, steel is 2.5 times denser than aluminum. Per cubic foot, steel weighs 489 pounds while aluminum weighs 168.5 pounds. When designing a building, that weight can make a massive difference in the project's outcome—and cost.

6 Different Types of Aluminum (User Guide)

giving engineers enough guidance in the use of aluminum that they will feel confident designing with it. The Aluminum Association, an industry associ-ation of aluminum producers, publishes the Specifications for Aluminum Structures (hereafter called the Aluminum Specifications), which are the gen-
