NFPA 69, Standard on Explosion Prevention Systems, offers definitive guidance on explosion protection and prevention systems. This document is applicable to woodworking, grain processing (including sugar), and machining facilities, where combustible dust can spark explosions. It also covers facilities in which flammable liquids are used or petrochemical processing takes place -- and explosions due to combustible gases or vapors are a concern.

NFPA 69 - PCCC T-M

This edition of NFPA 69 was approved as an American National Standard on July 19, 2002. Origin and Development of NFPA 69 In 1965, an NFPA Committee was appointed to develop standards for explosion protection systems. These standards would include information on inerting to prevent explosions and on

NFPA 69 - gost-snip.su

1.1* Scope. This code shall apply to the storage, handling, transportation, and use of liquefied petroleum gas (LP-Gas). A.1.1 General Properties of LP-Gas. Liquefied petroleum gases (LP-Gases), as defined in this code (see 3.3.43), are gases at normal room temperature and atmospheric pressure. They liquefy under moderate pressure and readily vaporize upon release of the pressure.

NFPA 58: Liquefied Petroleum Gas Code

The NFPA 69 standard dates back over 50 years, and it has been revised many times since its first publication. Some of the changes made to the NFPA 69-2019 document that differ it from the previous, 2014, version include: The adjustment for limiting oxidant concentration (LOC) values has been revised
